

CENTRALISED FLEET MANAGEMENT SYSTEM

The DBS Fleet Management is a job management software built to achieving synergy in fleet and workshop operations. It is a central point of interaction for all fleet management departments such as workshop, operations, tracking and any other department that works on a fleet on daily basis with the integration of an enterprise resource planning system, SAP Business One.

FEATURES

Vehicle Information

The Application captures all the important vehicle details such as registration number, model, manufacturer, standard mileage and the driver assigned to the vehicle. As the drivers log onto the app, all the information will be provided to make sure the driver is assigned to the right vehicle.

Vehicle Management

The logistics app manages driver Information and drivers' operational and performances data against the vehicle(s) has been assigned to, including costs. It also shows mechanic performances against the turnaround time, mileage, fuel consumption, vehicle maintenance and repairs.

Maintenance Scheduling

Fleet Management gives the facility to define the maintenance schedules of all types of services such as filters and oils for servicing of vehicles on the basis of mileage (odometer readings). Further, the solution has Maintenance Periodical Tracking, a feature which provides alerts when the vehicle needs maintenance along with the maintenance history for the serviced vehicles.

Mileage Tracking

With integration to a tracking system, the app will give ad-hoc reports on the mileage performance of the vehicle. The reports filters allows generation of daily, weekly, monthly and other periodic reports.

Spare Parts Management

The feature tracks the spare part usages, and allows the issuing of a new spare parts to the vehicle during service (replacement). Fleet Management also provides historical data on spare parts usage and issues per vehicle.

DATABASE

The transactions done using Fleet Management are stored and retrieved in a database server (SAP Business One HANA Server).

SOLUTION BENEFITS

- Easy management of vehicles and related costs
- Supports accurate planning and scheduling of vehicles in a timely and professional manner
- Easy querying of vehicle availability
- Easy tracking of dates and times a vehicle is being used in order to maximize utilization
- Easy tracking of mileage usage with odometer readings, hence efficiency fuel usage
- Retention of full maintenance and periodic maintenance history of vehicles such as tribology, as well as major and minor services
- Better understanding of man-hour usage in the mechanic workforce for improved task allocation and efficient work scheduling

SOLUTION BENEFITS

Light-weight application

Mobile app endpoint

Integration capability

Cross-app workflows

Simple
